VIKTORYIA NAUMENKA
Automation QA Engineer

ABOUT ME

Now I'm quite interesting in Automation quality assurance engineer career. My experience in scientific research will help me with noticing and understanding essential details and with processing big data during some QA routine. I've started with Python, but now I'm looking for opportunities for training and courses to learn more specific knowledge and skills in automation testing.

Since 2017 year I've being in career break because of full-time parenting. From this quite challenging living experience I get such skills as time-management, high resistance to stress and strong motivation to work ;)
